

Features :

**1) Outward Open**

When we open clipping classic buckles, the clip of the buckle is pushed inside. Contrary to the classic buckle, the clip of our product is not pushed BUT pulled and opened OUTSIDE.

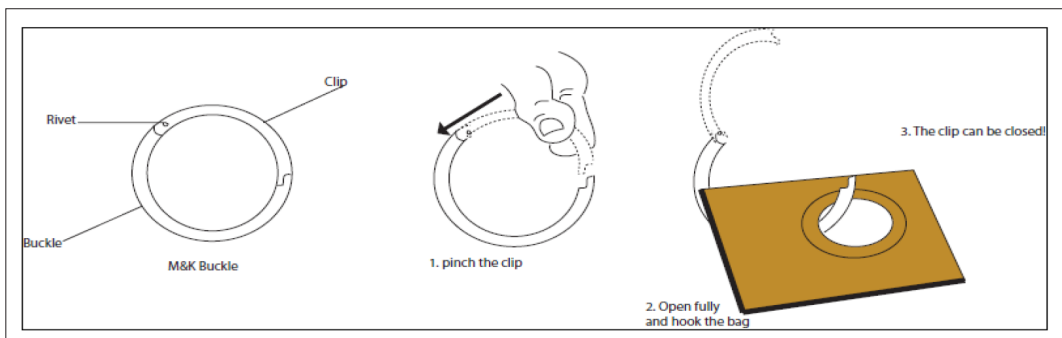

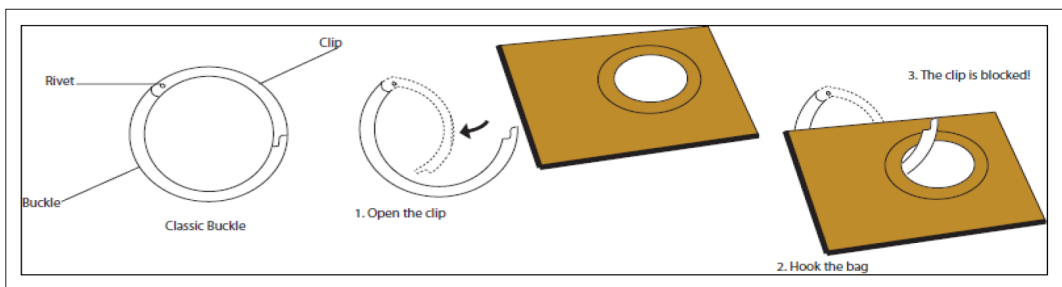

**2) On Purpose**

The clip of a classic buckle can be opened by accident, BUT the clip of our product can ONLY be opened on purpose.

**3) Fully Opened**

When we combine the buckle with a bag, we hook it into the bag and return the clip to the initial position. If we use a classic buckle, after hooking the bag, the clip is often blocked by the bag itself. It is difficult to close the clip. However, since the clip of our product is opened outside and fully opened, it is very simple to close the clip after hooking.
